

Orbital Super Yacht "Destiny"

Was created and designed by space architect John Spencer. Modeled after an ocean going super yacht for 10 passengers plus crew.

Destiny would be assembled in Earth orbit by fusing a dozen inflatable sections together. Her four large colorful sails would collect solar light, convert it to energy and also radiate heat away from the yacht.

She is about 300 feet long. Her most unique feature is a 60-foot in diameter clear "Float Sphere" near her center.
